5. HANDLING SUGGESTION

■ Reflow Conditions

Please stay with our proposed reflow conditions and do soldering within 2 times.

(1)	Preheat	160~180deg.C	120 sec.
(2)	Primary heat	>=220 deg.C	60~120 sec.
(3)	Peak	260 deg.C	10 sec. Max.

■ Manual Solder iron (Example)

Bit temp.: 350°C max., Time: 3sec max. ,

Each terminal solder only should be soldered once.

■ Mounting Conditions

Our products are suitable for most automated SMT processes. However, we strongly advise all our customers to conduct SMT sampling prior to mass production in order to make sure production processes will not affect the properties and specifications of our product.

Seal welding and mounting procedures involving the use of ultra-sonic processes are not recommended and will affect and/or damage the internal properties of our product.

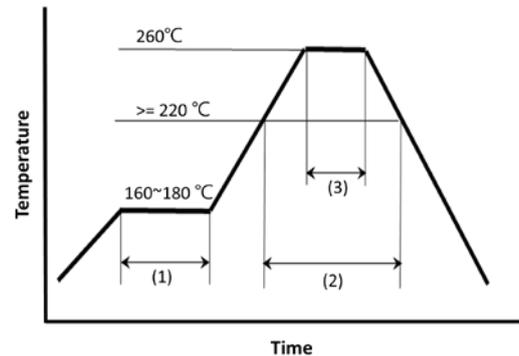

Excessive shock during the mounting process will also affect the product and we strongly recommend setting SMT conditions to minimize such conditions.

If a possibility of the PCB being warped exists we strongly advise to ensure the degree of warping will not affect the product.

Please also ensure the operating characteristics and or soldering conditions are all within the specifications of use for our product.

Ultimately the worst case scenario of all the above will lead to cases of non-oscillation but other negative effects are also likely should our products be used in an inappropriate way.

Please note such cases of misuse and its related quality issues are not included in our product warranty.

■ Cleansing Conditions

General cleaning solutions may be used to clean our products but we always recommend testing to be performed prior to mass production processes. Ultrasonic cleaning procedures are not recommended and we strongly advise other forms of cleansing to be evaluated first. Unsuitable cleansing may lead to a number of negative effects such as damage to the product surface, discoloration of the product, corrosion of the package, package contamination, illegible marking, etc. Please note cases of unadvised treatment and its related quality issues are not included in our product warranty.

■ Storage Conditions

Please ensure our products are preserved appropriately in their original packaging. Irregular environmental instances of moisture will affect our product's stability and may cause problems such as frequency instability, soldering ability and conditions, package defects, and other problems. It is essential to keep our products in a clean dust-free environment out of direct sunlight.

Our products' storage conditions should at least meet the following condition:

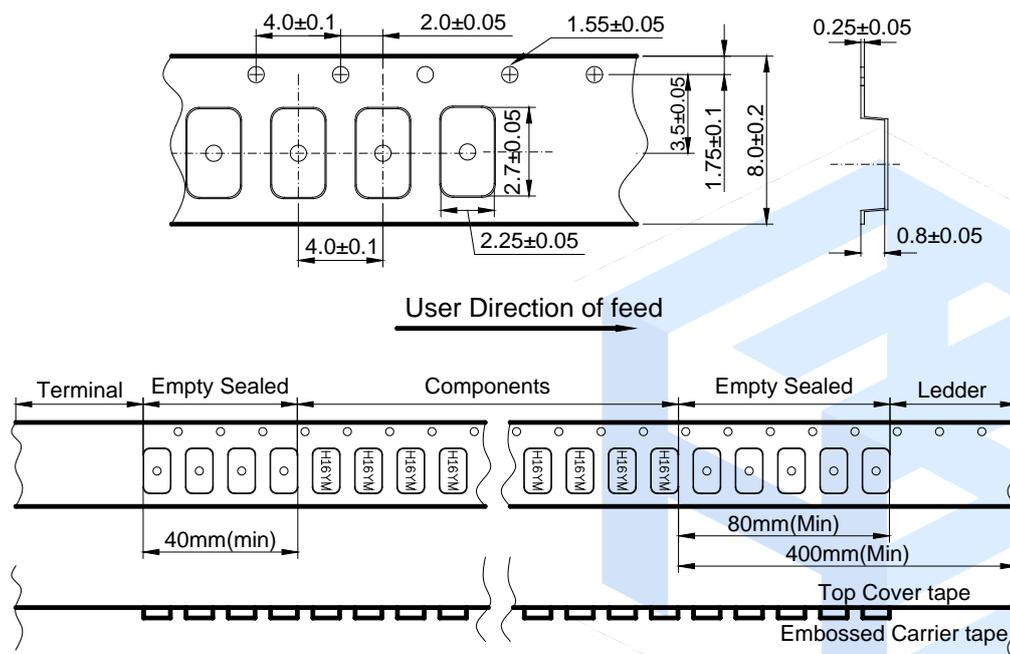

Environmental Temperature: + 40 degrees Celsius Maximum

Relative Humidity: 80% Maximum

Please note storage instances which do not conform to our guidelines and the related quality issues produced as an outcome are not included in our product warranty.
